

start site of the CsVMV promoter as described in Example 2. Primer extension reactions were carried out as described and the products of the extension reactions obtained with two annealing temperature (30°C and 40°C) and reference sequencing reactions of CVP1-uidA gene construct (lane A, C, G and T) performed with the same labeled primer, were subjected to electrophoresis in a 7M urea, 7.5 % polyacrylamide gel. The plus strand DNA sequence (complementary to the sequence read on the gel) is shown (SEQ ID NO:37) and the transcription start site (A*) is indicated by an arrow at nucleotide number (nt.) 7604. Numbers correspond to the nucleotide sequence numbers of the CsVMV genome, Calvert et al, J Gen Virol, 76:1271-1276, 1995.

Attached hereto is Appendix A which is the marked-up version showing the changes made to the Specification.

SEQUENCE LISTING

Enclosed is a Sequence Listing on paper copy, made in accordance with 37 CFR §1.821 - §1.825. Also enclosed is the Sequence Listing in computer readable form, submitted as required by 37 CFR §1.821(e), on which the Sequence Listing is labeled TSRI 504.1.

Applicants respectfully request entry of the Sequence Listing and computer readable copy thereof.

I hereby state that the content of the paper and computer readable copies of the Sequence Listing, submitted in accordance
